ABDULRAHMAN A

AWS DevOps Engineer

+91 8248088037 | abdulrahman90196@gmail.com | LinkedIn Profile | abdulrahman.website | Trichy, India

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 1 year of combined experience, including 10 months of hands-on professional experience and a 3-month internship. Skilled in AWS cloud services, CI/CD automation, Infrastructure as Code with Terraform, containerization with Docker, and Linux server administration. Proven track record in building and maintaining CI/CD pipelines, ECS Fargate deployments, automated backup systems, and cloud infrastructure provisioning.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS): EC2, S3, IAM, VPC, RDS, ECS (Fargate), ECR, ELB, Route 53, CloudWatch, SNS, CodePipeline, CodeBuild, CodeDeploy

Infrastructure as Code: Terraform (modules, state management, remote backend), Checkov (IaC security scanning)

Containerization: Docker, Docker Compose

CI/CD & Automation: AWS CodePipeline, CodeBuild, CodeDeploy, GitHub Actions

Operating Systems: Window, Linux (Ubuntu), Linux Server Administration, System Hardening, SSH, Firewall Configuration, rsync

Networking & Security: VPC design, Subnets, Security Groups, IAM policies, SSH, Teleport (zero-trust access), API Basics

Version Control: Git, GitHub

Monitoring & Observability: AWS CloudWatch (metrics, alarms, log groups), AWS SNS

Databases: MySQL, Amazon RDS

Programming & Scripting: Python, Shell Scripting (Bash), YAML, C

Tools & IDEs: VS Code, Nginx (reverse proxy & web server configuration)

EDUCATION

B.Tech – Information Technology | *Aug 2021 – June 2024*

University College of Engineering (BIT Campus), Anna University, Trichy | CGPA: 7.13

Diploma – Engineering | *june 2018 – Jul 2021*

Kongunadu Polytechnic College, Trichy | CGPA: 8.30

PROFESSIONAL EXPERIENCE

Junior DevOps Engineer | CloudGarage LLP |*Sep 2025 – June 2026*

- Managed and maintained AWS infrastructure including VPC, EC2, ECS Fargate, ECR, RDS, S3, IAM, Route 53, CloudWatch, and security groups across multiple client environments.
- Built and maintained reusable Terraform modules to automate cloud infrastructure provisioning using Infrastructure as Code (IaC) best practices.
- Designed and maintained CI/CD pipelines using AWS CodePipeline, CodeBuild, CodeDeploy, GitHub Actions, and automated application delivery.
- Executed Docker-based application deployments using Docker, Docker Compose, Amazon ECR, and ECS Fargate, eliminating server management overhead.
- Administered Linux servers, including monitoring, troubleshooting, backup automation, and security hardening to maintain system reliability and uptime.
- Configured blue/green deployments using AWS CodeDeploy to enable zero-downtime application releases.

AWS DevOps Engineer Intern | CloudGarage LLP |*June 2025 – Aug 2025*

- Supported AWS cloud infrastructure tasks using EC2, S3, IAM, VPC, and CloudWatch under senior engineer guidance.
- Performed Linux server setup, SSH access configuration, firewall rules, package installation, and issue troubleshooting.
- Worked with Docker and Docker Compose to understand and support containerized application deployment workflows.
- Assisted in CI/CD pipeline activities using GitHub Actions, and for automated build and deployment processes.
- Contributed to writing and updating Terraform code for infrastructure provisioning and environment automation.

PROJECTS

MyProperty – Multi-Domain Property Platform | *Mar 2026 – June 2026*

Client: Sumisa Technologies

- Updated and managed Terraform code to provision and maintain AWS infrastructure including VPC, subnets, ECS Fargate, Application Load Balancer, ECR, IAM, Route 53, CloudWatch, S3, and security groups.
- Implemented Docker-based containerized application deployment on ECS Fargate, enabling serverless container orchestration at scale.
- Rebuilt and maintained the CI/CD pipeline using AWS CodePipeline, CodeBuild, CodeDeploy, GitHub integration, and S3 artifact storage for automated delivery.
- Configured buildspec and deployment files to build Docker images, push to ECR, create ECS task definitions, and deploy using blue/green deployment strategy.

AutoCloud – AWS Infrastructure Automation | *Nov 2025 – Feb 2026*

Client: Internal

- Developed reusable **Terraform template code/modules** to automate provisioning of **7+ AWS resources**, including **VPC, EC2, RDS, S3, ECR, ECS, SNS, and Golden AMI images**.
- Implemented **Infrastructure as Code (IaC)** practices to enable scalable, version-controlled, and repeatable cloud infrastructure deployments.
- Configured secure networking, private connectivity, and cloud resource access policies using **IAM roles, security groups, route tables, subnets, and VPC design best practices**.
- Improved infrastructure deployment efficiency by standardizing Terraform configurations and reducing manual provisioning effort.

Hetzner Dedicated Server Setup & Automated Backup | *Sep 2025 – Oct 2025*

Client: Internal / Development Team

- Provisioned and configured a Hetzner dedicated server with Ubuntu Linux for internal development, testing, and deployment workloads including disk partitioning, storage layout, and user management.
- Configured Teleport for secure, centralized developer access management with audit logging and access controls.
- Designed and implemented an automated backup system using Shell scripting, rsync, and hard links with weekly full + daily incremental backups to Hetzner Storage Box, with 7-day rotation and active file tracking for safe restores.

CERTIFICATION

Networking Basics

Cisco Networking Academy | Issued Mar 2026

Course Badge

Cloud Essentials

Naan Mudhalvan | Issued Mar 2023

Skills: Cloud Computing and Amazon Web Services (AWS)
